

Technical Requirements

Recommended technologies and tools to use for this internship.

Framework

React.js

Or

Next.js

Styling

TailwindCSS

Or

Standard CSS

Icons

React Icons

Or

Download From Figma

Animations (Optional)

GSAP

ThreeJS

Deployment

Vercel

Phase 1

Level 1: Initial Project Setup

Initial project setup and building form fields to capture customer data.

POST API Endpoint

https://us-central1-api-skinstric-ai.cloudfunctions.net/skinstricPhase0ne

```
{
  "name": "John Doe",
  "location": "New York"
}
```

Output

```
{
  "SUCCUSS": "Added John Doe from New York"
}
```

Phase Requirements

- Initial project setup
- UI Design matches figma
- Both form fields working for {name} and {location}. They store the user's information and send it to the backend to the API given. (You can store them in local storage)
- User is not allowed to proceed without entering the expected value (form validation that {name} and {location} are strings and do not contain numbers or broken values)
- Back and proceed buttons

Phase 2

Level 2: Upload Your Image

Upload your image in Base64 to this endpoint to be returned a randomized (simulated) list of demographic values as if the AI is scanning the face and giving you its predictions of what it thinks the face is.

POST API Endpoint

https://us-central1-api-skinstric-ai.cloudfunctions.net/skinstricPhaseTwo

```
{
  "image": "base64_encoded_string"
}
```

```
{
  "message": "SUCCESS: You hit the Level 2 API. Image is a valid Base64 String.",
  "data": {
    "race": {
      "black": 0.11956584717786628,
      "white": 0.1280179046276461,
      "southeast asian": 0.06297961651829671,
      "south asian": 0.1425984353728242,
      "latino hispanic": 0.0619650872094126,
      "east asian": 0.2525825951799374,
      "middle eastern": 0.23229411391401664
    },
    "age": {
      "20-29": 0.031678993030692736,
      "30-39": 0.14951751927400894,
      "40-49": 0.21423285073736906,
      "10-19": 0.060884420054723574,
      "50-59": 0.14185781411091578,
      "3-9": 0.11754071465957916,
      "60-69": 0.0640062076182385,
      "70+": 0.10014548458462194,
      "0-2": 0.12013599592985022
    },
    "gender": {
      "male": 0.520499217733165,
      "female": 0.47950078226683496
    }
  }
}
```

Phase Requirements

- UI Design matches figma
- Users must upload the image in base64 format to the api given.
- On the demographics page, scores (Race / Age / Gender) are listed in descending order and to 2 decimal places.
- Clicking on a score allows the user to update their ACTUAL attribute. E.g. if the AI says they are "Black" but they are really South Asian, clicking "South Asian" will auto update the left sidebar block.

Phase 3

Level 3: Take a Selfie

Use the same logic and api as phase 2, but instead of uploading an image you need to create the option of taking a selfie from laptop/phone.

Phase Requirements

- UI Design matches figma
- Logic for taking a selfie
- Tablet and mobile responsiveness
